These embryos combine two great parents. We bought Hvn's Lass at the 2002 ABS Sale in Denver in partnership with the R2 Ranch in Texas. She is the one and only full sib to the very great Glacier Marias 548, Ref.Sire M. You will note that she is also a maternal half sib to Glacier Logan 210, one of the breed's high marbling bulls and the sire of these embryos. The dam, Glacier Rebalas is credited with bringing a lot of marbling into the breed through her sire, the ABS bull Creekside Copper. The proj Marb EPD on these embryos is in the top 1% of the breed.

1230 was one of our great 824 daughters. 824 was a very moderate sized, muscular bull that sired great sons and great daughters. Canyon was one of his greatest sons, and Marigold 1230 one of his greatest daughters. Unfortunately both 824 and Canyon have proved to be OS Carriers. Marigold 1230 is not - she is OSF Thank goodness for small, and in this case, large blessings. Marigold was a cow with tremendous volume and fleshing ability, which she passes on to her progeny. You will note her influence throughout the catalog. Chateau was a popular ABS sire, sired by King Rob from the Rebalas cow line. A big spread bull from birth to yearling, with excellent muscle expression and gainability. We flushed him to some of our best cows. He is the MGS to Lots 5, 23 and 48, and sire to Lot 155.

A number of Marigold's natural progeny were herd bulls: BUF CRK Coppertop 1628, a great son of Coppertop Chief 301, that sold to the Forsters in ND in 1989; BUF CRK Iowa 2886, that sold to the Mebanes in CO in 1993; he was a low BW bull that worked well at high altitudes. The Lehmanns in Ontario bought a Vaquero grandson, BUF CRK Gold Quest 4506 in 1997.

Major League certainly needs no introduction - one of Cherokee's greatest sons he was the most heavily used bulls in the breed in 2009.

**Dam's Reg# 354500 SELLING 3 EMBRYOS**

2570 is one of RCN Dynamo 732's top daughters. One of the breed's great maternal sires, he was a very high libido bull, siring masculine sons with big testicles and a great deal of eye appeal. His daughters are high producing, highly maternal cows with strong records on their progeny, and they literally stand out. Visitors to the ranch have been consistent in picking them as ideal cows. You will note 2570's influence throughout the catalog.

Glacier Marias, Ref Sire M was a high performing, big time carcass sire that we used heavily in the '90s. We flushed many of our donor cows to him. These embryos combine calving ease, maternal traits, performance and carcass.

Another favorite daughter of Dynamo 732, and another beautiful, maternal and highly productive cow. 3912 was one of the cows we picked in 1998 to be on display for the Red Angus Convention tour when it came to the ranch.

The Amber line originated in Iowa. Our first cow, a daughter of F0863, was bought in 1982 from Cornie Folkert's Mid-America herd. All of the females in this line are exceptionally strong and long-lived producers, with progeny records on their calves that are way above average.

One of the most remarkable things about 3912 is her ability to go from natural production, to ET, then back to natural production without skipping a beat. We put her back in ET last winter, and she continues to produce embryos. If anyone is interested in buying a flush on her, please contact us.

These embryos are sired by Major League for another great combination of calving ease, maternal traits, performance and carcass.

B571, Ref.Sire J, is another sire that needs no introduction. One of the breed's great sires, his semen is rare. Pinemarie 3940 is quite possibly the only living daughter of OK Double Chief 4430, the sire of VC Chief 105, Ref.Sire A. We used 4430, and his sons heavily in the '70s. He truly is a foundation sire. 3940's dam was 634, a top daughter of Coppertop Chief 301, and a great cow for us. The averages on her natural progeny are: BW 9/89 WR 8/109 YR 7/106 MPPA 107.9. 634 & B571 are in the top 3% of the breed for ME, 3940 is in the top 1%.

After a no fault record and twelve calves we took 3940 out of production to be flushed. She is without doubt the right kind of cow.

**Dam's Reg#332629 SELLING 8 EMBRYOS**

Prolific and productive, 9005 is one of the cows that came up from Jack and Martha Roberts. 9005 was one of our "share" calves. Her sire, Sioux Chief 832, was tested at the New Mexico BCIA test where he was one of the high gaining bulls with a 3.8 ADG and GR of 115. Primero, her MGS was one of the breed's premier calving ease and maternal sires.

9005 is yet another cow that always calved right on schedule. Extremely fertile and productive, she has also been a prodigious producer of embryos. Three full sib brothers to these embryos, averaged \$3900 in 2005. Two of them sold to Dale Faylor in KS.

**Dam's Reg#356162 SELLING 10 EMBRYOS**

9109 is best known as the dam to Cherokee Canyon 4912, certainly one of the breed's most famous sires. She is a big REA cow and ranks in the top 1% of the breed. She is sired by BUF CRK Cherokee 1431, a bull that came "in dam" when we bought his mother as a bred heifer from Don and Linda Mackenzie in Alberta, at the 1986 NILE sale. 1431's PGS is one of the great maternal sires in Canada, and 1431 followed suit. His daughters have been beautiful, correct, efficient, and very productive with excellent udders. 9109 is a good example.

9109 produced eight natural calves before she went into ET.

9109 was a great producer of embryos. Twenty-three sons have gone through our sales, including R034 by B571, that sold to the R2 Ranch in Texas for \$11,000. Numerous heifers are in our herd and have sold, including a full sister to R034 that sold at the "History in the Making Sale" in Texas for \$16,000.

In 2003, Buffalo Creek donated a heifer to the National RA Junior Association's auction at the National Convention. The winning buyer would have the pick of our 2003 heifer crop. Richard Luciano, R2 Ranch bought the heifer for \$16,000 and the choice was a 9109 daughter sired by EBV 3531, a full sib to these embryos. 3531 was one of the breed's early high Marbling bulls. Semen on him is virtually non-existent.

Now dead, 9109 has probably had more influence on the breed than any other cow. She is definitely one of the breed greats. These embryos are a unique opportunity to share the two parents' greatness.
